1300 HANDOC (1300 426 362) or cconte@plasticsurgerycentre.com.au

In Western Australia hand and wrist injuries are the second most common cause of serious workplace injuries, accounting for over 40% of hospital admissions. It is important for every Medical Practitioner to understand acute hand and wrist injuries and how to treat them.

Dr Lip Teh and Dr Anthony Williams will be visiting Kalgoorlie on Thursday the 21st January for a series of Education Seminars on hand and wrist injuries if you and your practice are interested in arranging a session with one of these Hand and Wrist Surgeons please contact Corinna Conte as above to arrange a time slot – places are limited to be quick to book your time.

Attendees will hear an educational presentation from one of HANDOC's leading Hand & Wrist Surgeons. Be updated on a range of commonly missed hand and wrist injuries covering key diagnostic strategies and methods to improve skills and knowledge of common acute hand injuries.

- Discuss hand and wrist anatomy
- Enhance hand and wrist medical diagnostic skills for a range of injuries including open & closed injuries, fractures, lacerations, amputations and nerve injuries.
- Examine evaluation techniques for emergency hand and wrist injuries
- Determine appropriate medical intervention for complex hand and wrist injuries
- Concluding with an opportunity to ask questions
